Part I Characterization

1	From Complex to Spatial Networks	3
1.1	Early Days	3
1.2	Complex Networks	4
1.3	Space Matters	5
1.4	Definition and Representations	5
	1.4.1 Spatial Networks	5
	1.4.2 Representations of Networks	6
	References	8
2	Planar Graphs	9
2.1	Graph Theoretical Tools	10
	2.1.1 Definition and Representation	10
	2.1.2 K_5 Is Not Planar	11
	2.1.3 Euler's Formula	12
	2.1.4 Distance from Planarity	13
2.2	Planarity of Street Networks	18
	References	20
3	Directed and Mixed Graphs	23
3.1	Theoretical Results	23
	3.1.1 Definitions	23
	3.1.2 Components of a Digraph	24
	3.1.3 Statistics of Loops	25
	3.1.4 Perturbation of the Shortest Path in a Directed Lattice	27
3.2	Empirical Results: One-Way Streets	28
	3.2.1 Fraction of One-Ways	30
	3.2.2 Statistics of the Detour Index	31
	3.2.3 Asymmetry of Shortest Paths	33
	References	36

4	Simple Measures	39
4.1	Irrelevant Measures for Spatial Networks	39
4.1.1	Degree	40
4.1.2	Length of Segments	42
4.1.3	Cell Area	44
4.1.4	Clustering and Assortativity	45
4.1.5	Average Shortest Path and Diameter	47
4.1.6	Empirical Illustrations	48
4.2	Simple Characterizations	54
4.2.1	α and γ Indices	54
4.2.2	Organic Ratio and Ringness	55
4.2.3	Edge Orientation Distribution	56
4.2.4	Shape Factor	58
4.2.5	Detour Index (or Stretch or Route Factor)	58
4.2.6	Cost, Efficiency and Robustness	60
	References	63
5	Betweenness Centrality	65
5.1	Definition	66
5.2	General Properties	66
5.2.1	Numerical Calculation: Brandes' Algorithm	67
5.2.2	The Average BC	68
5.2.3	Edge Versus Node BC	69
5.2.4	Adding Edges	70
5.2.5	Relation Between the BC and the Clustering Coefficient	72
5.2.6	Scaling of the Maximum BC	72
5.3	The BC for Simple Graphs	74
5.3.1	Regular 1d and 2d Lattices	74
5.3.2	Cayley Tree	77
5.3.3	Branches and Ring	78
5.3.4	Grid-Tree Network	83
5.4	The BC in a Disk: The Continuous Limit	87
5.4.1	The Infinite Density Limit	87
5.4.2	Finite Density: A Perturbation Expansion	90
5.5	Empirical Measures on Street Networks	97
5.5.1	Spatial Patterns of Large BC Nodes	97
5.5.2	The BC and Socio-Economic Indicators	101
5.5.3	The BC Probability Distribution for Street Networks	101
5.5.4	The Effect of One-Way Streets on the BC	105
	References	107

6	The Shape of Shortest Paths	109
6.1	(Euclidean) First Passage Percolation	109
6.1.1	Models and Definitions	109
6.1.2	Known Results About Exponents	112
6.1.3	Numerical Results	115
6.1.4	Travel Time and Transversal Fluctuations	117
	References	118
7	Simplicity and Entropy	121
7.1	Simplicity	121
7.1.1	Simplest Paths	121
7.1.2	The Simplicity Index and the Simplicity Profile	124
7.1.3	A Null Model	125
7.1.4	Measures on Real-World Networks	125
7.2	Information Perspective	130
7.2.1	Entropy and Simplest Paths	131
7.2.2	Quantifying the Complexity	133
	References	137
8	Large-Scale Tools	139
8.1	Spatial Dominance	140
8.1.1	Constructing the Dominance Tree	140
8.2	Class First-Passage Times	144
8.3	Community Detection in Spatial Networks	146
8.3.1	Modularity	147
8.3.2	A Null Model for Spatial Networks with Marks	148
8.3.3	Synthetic Spatial Network Benchmarks	152
8.3.4	Modifying the Modularity	153
8.4	Persistent Homology	157
8.4.1	Topological Data Analysis	157
8.4.2	Empirical Results	159
	References	165
9	Typology of Planar Graphs	167
9.1	Area and Shape of Faces	167
9.1.1	Characterizing Blocks	168
9.1.2	A Typology of Planar Graphs	171
9.2	Approximate Mapping of a Planar Graph to a Tree	174
9.3	An Exact Bijection Between a Planar Graph and a Tree	178
9.4	Machine Learning Approaches	182
	References	184
10	Measuring the Time Evolution of Spatial Networks	187
10.1	Road Networks	188
10.1.1	Organic Growth	188
10.1.2	Effect of Planning	196
10.1.3	Simplicity Measures	204

10.2	Subways	208
10.2.1	Generalities	208
10.2.2	Typical Numbers	210
10.2.3	Network Evolution	212
10.2.4	Standard Measures	213
10.2.5	Efficiency	214
10.2.6	Temporal Statistics: Bursts	217
10.2.7	Core and Branches: Measures and Model	219
10.2.8	Spatial Organization of the Core and Branches	227
	References	231
Part II Models		
11	Spatial Generalizations of Random Graphs	235
11.1	Spatial Version of Erdos-Renyi Graphs	235
11.1.1	The Erdos-Renyi Graph	235
11.1.2	Planar Erdos-Renyi Graphs	237
11.2	The Hidden Variable Model for Spatial Networks	238
11.2.1	Effect of Space	239
11.2.2	Effect of Traffic	240
	References	241
12	Spatial Small-Worlds	243
12.1	The Watts-Strogatz Model	243
12.2	Spatial Generalizations in Dimension d	244
12.3	Navigability in the Kleinberg Model	247
12.3.1	Searchable Networks	247
12.3.2	Sketch of Kleinberg's Proof	249
	References	252
13	Growing Spatial Networks	253
13.1	Preferential Attachment and Space	253
13.1.1	Preferential Attachment and Distance Selection	255
13.1.2	Searching in Spatial Scale-Free Networks	262
13.2	Attraction Potential Models	263
13.2.1	The Connection Rule	264
13.2.2	Uniform Distribution of Nodes	265
13.2.3	Exponential Distribution of Centers	266
13.2.4	Effect of Centrality and Density	267
13.2.5	The Appearance of Core Districts	275
	References	276
14	Tessellations of the Plane	277
14.1	The Voronoi Tessellation	277
14.1.1	Average Properties of the Poisson-Voronoi Tessellation	279
14.1.2	Statistical Properties	281

14.1.3	Central Limit Theorem for the Total Length	285
14.2	Effect of the Density of Points	286
14.3	Crack and STIT Tessellations	288
14.4	Planar Fragmentation	289
	References	292
15	Proximity Graphs	295
15.1	Random Geometric Graphs	296
15.1.1	The Hard Case	296
15.1.2	Soft Random Geometric Graphs	301
15.1.3	The Full Connectivity Probability	302
15.1.4	The Waxman Model	304
15.1.5	Random Geometric Graphs in Hyperbolic Space	308
15.2	Bluetooth Graph and Sparsification	309
15.3	The k -nearest Neighbour Model	310
15.3.1	Definition and Connectivity Properties	310
15.3.2	A Scale-Free Network on a Lattice	311
15.4	A Dynamical Proximity Model	313
15.4.1	The Model	313
15.4.2	Stationary State	314
15.4.3	Percolation Properties	315
15.4.4	Degree Distribution	315
15.5	Apollonian Networks	316
	References	317
16	Excluded Volume Graphs	319
16.1	Delaunay Graph	319
16.2	Gabriel Graph	320
16.3	Relative Neighborhood Graph	323
16.4	β -Skeletons	323
	References	326
17	Loops and Branches	327
17.1	Reducing the Complexity of a Spatial Network	327
17.2	A Loop and Branches Toy Model	330
17.2.1	Exact and Approximate Formulas for the BC	331
17.2.2	Threshold Value of w and Optimal ℓ	335
17.3	Analyzing the Impact of Congestion Cost	339
17.3.1	An Exactly Solvable Hub-and-Spoke Model	339
17.3.2	Congestion and Centralized Organization	343
	References	346
18	Optimal Networks	347
18.1	Optimization, Complexity, and Efficiency	347
18.1.1	Complexity	347
18.1.2	Efficiency of Transport Network	348
18.2	Minimum Spanning Tree	350

18.2.1	Minimum Spanning Tree on a Complete Graph	351
18.2.2	Properties of the Euclidean Minimum Spanning Tree	353
18.3	Geometric t -Spanners	359
18.3.1	Definition	359
18.3.2	The Theta Graph	360
18.4	Optimal Trees: Generalization	361
18.5	Beyond Optimal Trees: Noise and Loops	366
